

With the Reboots Go X Lite, we are offering a more affordable version of our high-end model, the Reboots Go X. The vision behind the Go X Lite was to provide ambitious athletes with effective regeneration without having to sacrifice the proven Reboots technology - but at an entry-level price that is accessible. While the Reboots Go X with 8 air chambers provides an intensive and all-encompassing compression massage, the Go X Lite offers 6 air chambers. This means a less intense but still effective massage that is ideal for price-sensitive athletes who still want innovation and quality.

No hoses, no sockets, no bullshit - the AirX technology enables the Go X Lite to work completely without a cumbersome hose system. The result: maximum freedom of movement and particularly easy handling. With a battery life of 1.5 hours, the Go X Lite is the perfect companion for on the go - whether at a training camp, competition or sports vacation.

Xperience the future of recovery with the new Reboots Go X Lite!

AirX-TECHNOLOGY

Reboots has revolutionised the pump system with the new AirX technology, which makes it possible to connect individual pump units directly to the air chambers of the Pants. This eliminates the need for hoses and a large control unit. In addition, each of the 12 chambers in total can be individually adjusted to provide the best, quietest and most personalised compression massage ever!

REBOOTS APP

Thanks to the Reboots App, each pump unit can be controlled individually and the pressure intensity can be adjusted to suit your personal preferences. Choose from 8 recovery programs, create your own regeneration sequences, choose the Quick start program and save your favourite settings for the next session. The Reboots App offers endless possibilities to perfectly tailor the Reboots massage to your own needs - your pressure, your programs, your choice for the ultimate recovery

OVERLAPPING TECHNOLOGY

With our innovative Overlapping Technology, the 6 overlapping air chambers per leg are perfectly harmonized. The overlapping is important to distribute the pressure evenly across the entire compression zone. This prevents fluid build-up and directs the blood flow continuously and effectively in one direction for an extra smooth massage.

Size	Inner leg length	Body size
S/M	65-84 cm	160 - 180 cm
L	> 85 cm	180 - 200 cm
